DETAILED ACTION

1. This application has been reviewed. Original claims 1-10 are pending. The rejection cited stated below.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim 1 recites the limitation "the second MO in line 10. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Takimoto U.S. Patent No. 6,041,350[hereinafter Takimoto].

As per claim 1, Takimoto discloses a method for setting a synchronization status to a Managed Object (MO) of a management system, the method comprising the steps of:

a. changing an attribute of a management system's first MO that represents a first Network Element (NE) of a managed network (see figs 5-6 and col. 6, line 50 to col. 7, line 7 and col. 12, lines 42-60);

- b. responsive to the attribute change, initiating an update of a second NE of the managed network for propagating the change to the second NE, wherein the first and the second NEs are related NEs (see col. 12, lines 42-60);
- c. determining whether or not the update of the second NE has been completed successfully (see col. 7, line 7 and col. 12, lines 42-60); and
- d. setting a synchronization attribute of the second MO to a value representative of an outcome of the update of the second NE.(see col. 10, lines 30-42).

As per claim 2, Takimoto discloses the method claimed in claim 1, wherein: step c. comprises the steps: c.1 determining that the update of the second NE has not been completed successfully; and step d. comprises the step d.1. setting the synchronization attribute of the second MO to a value representative of a lack of synchronization of the second NE (see col. 6, line 50 to col. 7, line 7 and col. 12, lines 42-60).

As per claim 3, Takimoto the method claimed in claim 1, wherein the first and second NEs of the managed network are neighboring NEs and the first and second MOs of the managed system are associated with each other to reflect the neighboring relationship of the first and second NEs (see figs 5-6).

As per claim 4-5, Takimoto discloses the method claimed in claim 1, further comprising subsequent to step d. the steps of:

e. changing an attribute of the management system's second MO(see col. 6, line 50 to col. 7, line 7 and col. 12, lines 42-60);

f. determining the synchronization status of the second MO(see col. 6, line 50 to col. 7, line 7 and col. 12, lines 42-60); and

g. if the synchronization status of the second MO is representative of a lack of synchronizing, issuing a warning for informing of a lack of synchronization status of the second MO. (see col. 6, line 50 to col. 7, line 7 and col. 12, lines 42-60).

As per claims 6-10 the claims include features similar with features in claims 1-5, thus claims 6-10 are rejected same rational as claims 1-5.
